CONTENTS

No. 1 FEBRUARY 1958

ALFRED J. COULOMBRE AND JANE L. COULOMBRE. Corneal development. I. Corneal transparency. Six figures 1

ERNEST B. WRIGHT AND JOHN P. REUBEN. A comparative study of some excitability properties of the giant axons of the ventral nerve cord of the lobster, including the recovery of excitability following an impulse. Ten figures 13

ERNEST B. WRIGHT. The effect of low temperatures on single crustacean motor nerve fibers. Seventeen figures 29

A. L. HOPKINS. The rehydration contraction of frozen dried muscle. Seven figures 67

ROBERT E. ECKEL. Potassium exchange in human erythrocytes. I. General aspects of the fluoride effect 81

ROBERT E. ECKEL. Potassium exchange in human erythrocytes. II. The division of cell potassium into two fractions during incubation with 0.025 M NaF. Eight figures 109

ROBERT H. HERMAN, T. HASTINGS WILSON AND LEO KAZYAK. Electrolyte migrations across the wall of the guinea pig gall bladder 133

No. 2 APRIL 1958

A. ROTHSTEIN AND M. BRUCE. The potassium efflux and influx in yeast at different potassium concentrations. Six figures 145

HAROLD MILLARD SMITH. Effects of sulfhydryl blockade on axonal function 161

K. MARUYAMA. Interaction of insect actomyosin with adenosine triphosphate. Seven figures 173

WARREN R. FLEMING. The role of the corium in ion transport across the isolated frog skin. Two figures 189

BENJAMIN LOWENHAUPT. Active cation transport in submerged aquatic plants. I. Effect of light upon the absorption and excretion of calcium by *Potamogeton crispus* (L) leaves. Four figures 199

Benjamin Lowenhaupt. Active cation transport in submerged aquatic plants. II. Effect of aeration upon the equilibrium content of calcium in *Potamogeton crispus* (L) leaves. Three figures 209

Gerhard Giebisch. Electrical potential measurements on single nephrons of Necturus. Two figures 221

Suk Ki Hong and Roy P. Forster. Run-out of chlorphenol red following luminal accumulation by isolated renal tubules of the flounder *in vitro* 241

M. K. Slifkin and H. S. Gutowsky. Infrared spectroscopy as a new method for assessing the nutritional requirements of the slime mold, *Dictyostelium discoideum*. Three figures 249

Roy P. Forster and Suk Ki Hong. *In vitro* transport of dyes by isolated renal tubules of the flounder as disclosed by direct visualization. Intracellular accumulation and transcellular movement 259

Philip C. Laris. Permeability and utilization of glucose in mammalian erythrocytes. Eleven figures 273

No. 3 JUNE 1958

Donald J. Jenden with the technical assistance of Charles E. Knight. A quantitative interpretation of eserine-acetylcholine interaction in the frog rectus abdominis. Two figures 309

A. K. Bruce and J. N. Stannard. The effect of x-irradiation upon potassium retentivity of yeast. Four figures 325

Samuel B. Horowitz. The energy requirements of melanin granule aggregation and dispersion in the melanophores of *Anolis carolinensis*. Five figures 341

Samuel Dales and Kenneth C. Fisher. The effect of luminal on growth, glucose utilization and oxygen consumption in mammalian cells in tissue culture. Five figures 359

Louis B. Flexner, Josefa B. Flexner and Richard B. Roberts. Biochemical and physiological differentiation during morphogenesis. XXII. Observations on amino acid and protein synthesis in the cerebral cortex and liver of the newborn mouse. Five figures 385

J. F. Hoffman, M. Eden, J. S. Barr, Jr. and R. H. S. Bedell. The hemolytic volume of human erythrocytes. One figure 405

Joseph F. Hoffman. On the relationship of certain erythrocyte characteristics to their physiological age. One figure 415

R. A. Sjodin and L. J. Mullins. The action potential of frog nerve as affected by temperature, narcosis, and stimulation frequency. Six figures 425

A. Rothstein and M. Bruce. The efflux of potassium from yeast cells into a potassium free medium. Six figures 439

Comments and Communications:

F. R. Hunter. The effect of uranyl nitrate on the permeability of chicken erythrocytes. Two figures 457

Eric Ponder. Volume changes and partial hemolysis in heat-fragmented red cells, as observed by interference microscopy. One figure 461
